

Target Assessment: AcmeAI Target (SCENARIO_A)

Observation Window: Last 30 Days | Telemetry Sample: 500 Traces | Pricing Version: v2026_09

1. Pitch Deck Claim Verification Audit

Category	Stated Claim	Observed Telemetry Fact	Status	Conf.
Autonomy	95.0% Fully Autonomous Customer Support Agent Workflows	75.6% Observed autonomous rate of 75.6% is 19.4 percentage points below the stated claim of 95.0%. Human intervention was observed in 24.4% of traces.	PARTIAL	High
Economics	Unit economics of \$0.0010 per resolved customer task	\$0.0042 Observed telemetry-attributable cost of \$0.0042/task is 4.2x higher than the claimed cost of \$0.0010/task.	CONTRADICTED	High
Dependency	Multi-cloud resilient model orchestration with zero vendor lock-in	Primary Share: 70.5%, HHI: 0.581 Telemetry indicates multi-provider usage, but expenditure remains concentrated with a primary provider (70.5% share, HHI: 0.581).	PARTIAL	High

2. Autonomy Profile & Human Intervention Rate (HIR)

Analyzed **500** workflow traces. Autonomous rate is **75.6%** (378 traces). Human Intervention Rate (HIR) is **24.4%** (122 traces).
Detection Breakdown: 96 explicitly observed in telemetry spans, 26 inferred via reaction latency heuristics (>300s).

3. Unit Economics & Evaluation Overhead (Trust Tax)

Total Measured Telemetry Cost: **\$2.09** across 500 tasks. Telemetry-Attributable Cost Per Task: **\$0.0042** (Status: **MEASURED**).
Latency Profile: P50 = **1563.8ms** | P95 = **5425.4ms** | P99 = **6093.1ms**.
Trust Tax (Evaluation Overhead Rate): **11.23%** of inference cost. Evaluation Coverage: **44.0%** of total workflow traces. Status: **ADEQUATE_EVALUATION_COVERAGE**.

4. Provider Concentration & Architecture Dependency

Herfindahl-Hirschman Index (HHI): **0.5809** (Level: **MODERATE_CONCENTRATION**).
Interpretation: Inference expenditure is distributed across a primary and secondary provider.
Potential Implications: Partial redundancy exists, though major operational shifts in the primary provider would require workflow adjustments.

5. Data Coverage & Technical Limitations

The findings in this report are subject to the following explicit scope bounds and limitations:

- Only instrumented agent workflows in available telemetry were analyzed.
- Human intervention occurring outside instrumented software systems cannot be detected.
- Telemetry-attributable cost excludes infrastructure hosting, human operational labor, and legal governance overhead.
- Provider pricing calculations reference static versioned rates (v2026_09) and may differ from custom enterprise contracts.

6. Appendix: Evidence Audit Trail

ID	Type	Conf.	Observed Fact & Derived Metric
EVD-001	[DM]	High	Observed Fact: 378 of 500 available traces completed without human intervention. Derived Metric: Autonomous workflow completion rate = 75.6%. Human Intervention Rate (HIR) = 24.4%. Inference: Observed autonomous rate of 75.6% is 19.4 percentage points below the stated claim of 95.0%. Human intervention was observed in 24.4% of traces.
EVD-002	[DM]	High	Observed Fact: Total measured telemetry cost of \$2.09 across 500 tasks. Derived Metric: Telemetry-attributable cost per task = \$0.0042 (Status: MEASURED). Inference: Observed telemetry-attributable cost of \$0.0042/task is 4.2x higher than the claimed cost of \$0.0010/task.
EVD-003	[DM]	High	Observed Fact: Primary model provider (openai) represents 70.5% of cost. Derived Metric: Herfindahl-Hirschman Index (HHI) = 0.581 (MODERATE_CONCENTRATION). Inference: Telemetry indicates multi-provider usage, but expenditure remains concentrated with a primary provider (70.5% share, HHI: 0.581).
EVD-004	[DM]	High	Observed Fact: Evaluation spans present in 44.0% of total workflow traces (220/500). Derived Metric: Trust Tax (Evaluation Overhead Rate) = 11.23%. Status: ADEQUATE_EVALUATION_COVERAGE. Inference: Evaluation spans observed across active workflows.
